Act or lose 10 years, men at risk told

A study recently published by the British Medical Journal and partly funded by the British Heart Foundation has put a figure on the life-limiting effects of smoking, high blood pressure and high cholesterol. It is claimed that for the first time doctors have qualified the effects of these three leading killers of middle-aged men who reach 50 with all three risk factors. Essentially they are sacrificing 10 to 15 years of their lives. The important "Whitehall" study was of 19,000 civil servants over 40 years from the late 1960s.

If you have not experienced our exceptionally HEART HEALTHY French red wines before then now is the time. Our customer's testimonials support the research - **LOWER BLOOD PRESSURE.** [Testimonials](#)
